

Crop: Tomato

Disease Detected: Early Blight

Confidence: 92% | Severity: HIGH | Date: 26 Sept 2026

SYMPTOMS

- Dark spots on leaves

POSSIBLE CAUSE

High humidity

WHAT TO DO NOW

- Immediate: Remove infected leaves
- Monitor: Monitor neighboring field rows daily for spreading leaf spots.
- Prevent: Ensure proper row spacing, drainage, and clear plant debris after harvest.

BIOLOGICAL / ORGANIC OPTIONS

- Neem oil spray

CHEMICAL CONTROL

- Mancozeb spray

Safety Warning: Use protective gear while spraying chemicals. Consult local agricultural extension officer.

IMPORTANT: This report is an AI-generated advisory. Verify symptoms in the field before applying chemical treatment.
