AI Leaf Pathology Diagnosis

ID: REP-TEST-EN-001

Date: 1 Nov 2026

Farmer: Ramesh Patel

Crop: Cotton

Disease Detected: Cotton Leaf Curl Virus (Kukad / Churda Murda)

Confidence: 94% | Severity: HIGH | Date: 1 Nov 2026

SYMPTOMS

- Upward and downward leaf curling
- Thickening of veins on lower leaf surfaces
- Enation (leaf-like outgrowths) on underside

POSSIBLE CAUSE

Transmitted by whitefly (Bemisia tabaci) vectors during warm dry spells

WHAT TO DO NOW

1. Immediate: Install yellow sticky traps (15-20 per acre) immediately.
2. Monitor: Check under leaves every 48 hours for whitefly nymphs.
3. Prevent: Eradicate alternative weed hosts like Abutilon.

BIOLOGICAL / ORGANIC OPTIONS

- Spray Neem seed kernel extract (NSKE 5%) or 10,000 ppm Neem oil (3ml/L).

CHEMICAL CONTROL

- Spray Diafenthiuron 50% WP @ 1.25g/L water if whitefly count exceeds 6 per leaf.

Safety Warning: Use protective gear while spraying chemicals. Consult local agricultural extension officer.

IMPORTANT: This report is an AI-generated advisory. Verify symptoms in the field before applying chemical treatment.
